WITHDRAWAL SYNDROME

Granny Storm Crow's List - July 2014

MINI-DICTIONARY- Sci-Speak to English

Just a few definitions to help you along.
(You might want to print this up.)

A

**Acetylcholine** – a common neurotransmitter

**Achalasia** - a disease of the esophagus, a failure of smooth muscle fibers to relax

**Acute**- sharp or severe in effect; intense

**Adenosine**- a compound that makes you tired

**Adipose tissue** - fat

**Adipocyte** – a fat cell

**Adjunct** – a medication used in conjunction with another to help it work better

**2-AG** - A “messenger chemical” made by your body – similar to THC

**Agonist** – a chemical that activates a receptor

**Allodynia**- pain due to a stimulus which does not normally cause pain, (ie- a light touch)

**Allosteric**- works through a “back door” mechanism, not the usual binding site

**Amygdala** – an area of the brain that plays a key role in the processing of emotions

**Analgesic** – pain relieving

**Analogue** – a synthetic version
Anandamide/ AEA - a “messenger chemical” made by your body – similar to THC

Anaplasia – normal cells de-evolving and degrading into cancer cells

Anapyrexia - body temp dropping below normal

Angiogenesis - making new blood vessels, often to feed a tumor

Anorectic - Pertaining to anorexia, a lack of appetite

Antagonist – a chemical that blocks the action of an agonist

Antigen- a substance which causes an immune response

Anti-nociception- pain relieving

Anxiolytic – calming, anti-anxiety

Apoptosis - a process that leads to the normally programed death of a cell.

Aqueous humor – the liquid between the colored iris and the clear cornea of your eye

Arachidonic acid - an Omega 6

Astrocytes – Glial cells that link the vascular system to its neighboring neurons

Ataxia - lack of muscle coordination during movements like walking, or picking up objects

Atherogenesis – the formation of arterial plaques, as in atherosclerosis

Autapse - a synapse formed by the axon of a neuron on its own dendrites

Autocatalysis – when a single chemical reaction happens

Autocrine – when a cell secretes a compound that binds to receptors on the same type of cell.

Autopathic - relating to the structure and characteristics of a diseased organism. Idiopathic.
**Autophagy** – the cell self-destructs, literally “eats itself”

**B**

**Baroreflex** – the way your body uses your heart rate to control blood pressure

**Beta amyloid plaque / β-amyloid/ Aβ** – the stuff that gums up your brain in Alzheimer’s

**Biphasic** – different results for different doses, THC stops or causes nausea depending on dose

**Bronchodilator** – opens up the lungs

**C**

**Cannabinoids** – they activate CB receptors and are made in your body, cannabis or labs.

**Cannabinomimetic** – acts like a cannabinoid

**Capacitation** - chemical changes in a sperm that let it fertilize an egg.

**Carcinoma** - cancer

**Cachexia** – severe wasting away due to illness

**Caveolae** - little caves or pits in the cell membrane that trap fluids

**CCK** – an intestinal hormone that tells you that you are full and satisfied
Cell oncosis – the cells fill with water and calcium, their proteins denature, and they die.

Central nervous system/CNS - the brain and spinal cord

Chemotaxis - the movement of a cell or bacteria toward, or from a stimulus (food or a poison)

Cholinergics- drugs that inhibit, enhance, or mimic the action of acetylcholine

Chondrocytes- the only kind of cells found in healthy cartilage

Chronic – long term

Cirrhosis – scarring (usually) of the liver, impairing function

Clastrum - a thin, irregular, sheet of neurons attached to the bottom of the brain’s neocortex

Cogener- related chemicals

Colocalize- to occur together in the same cell.

Corticolimbic circuits- brain circuits that control cognitive and emotional behavioral processes.

COX-2 - a key enzyme that oxidizes Anandamide

Cross tolerance – tolerance to a drug causes tolerance to another, similar, drug

Cryofixed - frozen with liquid nitrogen for electron microscopic examination

Cutaneous – pertaining to the skin

Cytotoxic – poisonous to living cells
D

**Demyelinating diseases** - diseases in which the myelin on nerves is destroyed, as in MS

**Dimer** - a molecule composed of two identical, simpler molecules.

**Docosahexaenoic Acid (DHA)** - an Omega 3

**Dopamine** - a neurotransmitter that helps control the brain's reward and pleasure centers

**Dose-dependent manner** – the more they got, the more effectively it worked

**Downregulation** – a decrease in number

**Dysgeusia** - a distortion of the sense of taste

**Dysregulation** – malfunctioning, out of kilter

E

**Efferosytosis**- the removal of dead or dying cells

**Eicosanoids** – a group of bioactive compounds that include the endocannabinoids

**Eicosapentaenoic Acid (EPA)** – an Omega 3

**Emesis**- vomiting

**Endocannabinoid** – a chemical messenger made by your body- anandamide and 2-AG

**Endocannabinoid System/ ECS** – a system of chemical receptors on and between your cells
**Endogenous** – made in your own body, opposite of exogeneous

**Epidermal** – pertaining to the skin

**Epigenetic** - genes being turned on, or off, by chemical reactions, but with no change to the DNA

**Epithelial cells** – cells lining of your gut and surfaces of structures throughout the body

**Excitotoxic** - when nerve cells are damaged or killed by over-stimulation

**Exogenous** - from outside the body, opposite of endogenous

**Extracellular** – outside of the cells

**F**

**FAAH/ Fatty acid amide hydrolase** – an enzyme that breaks down anandamide

**Fascia** - connective tissues

**Follicule** - sac or cavity having excretory, secretory, or protective function: a hair follicle,

**G**

**GABA Glycine**- it keeps nerves from firing too often

**Ganglia/ ganglion** – a bunch of nerves outside the CNS, or some gray matter bits in the brain
Gene expression- the body reads a gene’s info and translates it into a product (protein, etc)

Genotype - all the genetic traits of an organism, both visible and hidden

Glial cells – they form myelin, and provide support and protection for neurons

Glomerulus - a kidney cell involved in the first stages of filtering blood

Glutamate- a compound that many nerves use to “talk to each other”

Gut microbiota - microorganisms that live in the digestive tract

H

Haploid – having half the number of chromosomes of a normal cell, as in sperm and eggs.

Hebbian theory - a neuroscience theory about the adaptation of brain neurons during learning.

Hemp – Cannabis sativa, usually referring to strains with a low level of THC

Hemoptysis – coughing up blood

Hematopoiesis – the making of new blood cells in bone marrow

Haematopoietic Stem Cells/ HSC - bone marrow stem cells that can give rise to blood cells

Hemopressin - a hemoglobin fragment that dilates blood vessels using nitric oxide

Hemostasis- the process of blood clotting

Hepatic – pertaining to the liver
Heterologous - from one species to another

Heteromer – a group containing 2 or more different types of things.

Hippocampus – part of the brain, controls mood and memory.

Homologous - having the same or a similar relation, as in relative position or structure

Homeostasis - your body keeping everything in balance and working right

Hydrolysis - breaking down a compound using enzymes

Hyper- over, above, extreme

Hyperalgesia – severe pain

Hypercapnia - too much CO2 in the blood

Hyperemesis – severe vomiting

Hyperphagic – over-eating

Hyperthermia – a fever

Hyperplasia- an increase in the number of normal cells in a tissue or an organ

Hypo- under, or below

Hypocretin (aka orexin)- a neuropeptide that regulates arousal, wakefulness, and appetite

Hypophagic – under-eating

Hypothermia – lowered body temperature

Hypoxaemia - low oxygen levels in blood

Hypoxia – not getting enough oxygen
**Ictal** - refers to a physiologic state or event such as a seizure, stroke, or headache.

**Ictus** - an epileptic seizure, or alternatively, a stroke

**Idiopathic** - of unknown cause

**Indica** - short plants, broad leaves, solid buds; “heavy” body high, good pain relief, some CBD

**Inflammasome** - immune system receptors and sensors that regulate inflammation

**In silico** – done on a computer

**In vivo** – in a live animal

**In vitro** – in a test tube

**Infarction** – damage from a lack of blood due to a blood vessel blockage

**Intraocular** – inside the eye

**Intrathecal injection** - injected under the arachnoid membrane of the brain or spinal cord

**Intrauterine** – inside the uterus

**Inverse agonist**- binds to a receptor like an agonist, but causes the opposite effect

**Involution** - the shrinking or return of an organ to a former size, as in a post-pregnancy uterus

**Ischemia** – damage from lack of blood to an area
J

**Jejunum** - the middle section of the small intestine in most higher animals

---

K

**Koro**- a fear that one’s genitals are retracting and will disappear, “genital retraction syndrome”

---

L

**Lactating** - producing breast milk, nursing

**Leptin** – a hormone that turns on hunger

**leukocytospermia** – too many white blood cells in the semen causing serious fertility problems.

**Leukotrienes** - compounds that promote asthma and allergic reactions

**Ligand** - a chemical that binds to a receptor- THC is a ligand of CB1 and CB2 receptors
Linoleic acid (LA) - is a polyunsaturated omega-6 fatty acid

Lipids – fats and oils

Lysis - the destruction or decomposition of a cell

M

Macrophages - specialized cells that attack foreign substances, disease germs and cancer cells

MAGL - an enzyme that breaks down 2-AG

MAPK-JNK signal pathway - the way the receptor’s message gets into the nucleus’ DNA

Meiosis - cell division that results in a sex cell (sperm or egg).

Metabolites – what’s left over after your body breaks down a compound

Metastasis – spreading through the body

Microglial cells – they destroy germs and remove dying cells, but can “go crazy”, doing damage

Microphage - a white blood cell capable of ingesting bacteria, etc.

MicroRNA - short, single-stranded RNA molecules that regulate gene expression

Micturation – urination, peeing

Mitosis - one cell divides into 2 identical “carbon copies” of itself.

Modulate – control or regulate something
Monocytes- big white blood cells that can change into macrophages or dendritic cells.

Murine - mouse

Mydriasis - a disorder in which the pupil of the eye dilates abnormally, and stays dilated

Myelinated – a protective covering on the axion part of a nerve cell

Myocardial – pertaining to the heart muscle

Myopericarditis - Inflammation of the heart wall and the sac around it, the pericardium

Nanomolar – a very tiny amount

Necrotic – dead or dying

Nephritis – an inflammation of the kidneys

Nephro – referring to the kidneys

Neurogenesis – new brain cells are being formed

Neuropathic Pain – pain due to nerve injury

Neuropeptide – compounds used by neurons to “talk” with each other

Neurophatogenic - causing disease of nervous system

Neuroprotective – protects nerves and brain cells
Neurotransmitter - a chemical messenger that carries messages between neurons and other cells

Neutrophil – the most common type of white blood cell

Nocebo - a harmless substance that creates harmful effects in a patient. Opposite of placebo.

Nociceptive – experiencing pain from a stimulus such as heat or tissue damage

Nociceptor – pain nerve

Nonpsychoactive – won’t get you high

Nonpsychotropic – won’t get you high

Nootropic drug - a mind enhancing drug

Nucleus Accumbens – part of the brain involved in reward/addiction

 Obtundation- less than fully alert, an altered level of consciousness

 Occluded – blocked up, as in an occluded artery

 Ocular – referring to the eye

Olfactory – pertaining to smell, odor detection

Oligodendrocytes - cells that make the myelin sheath that protects CNS nerves
Oocyte – a female germ cell/ egg

Orexin (aka hypocretin)- a neuropeptide that regulates arousal, wakefulness, and appetite

Oromucosal – pertaining to the lining inside of the mouth

Ortholog- the same gene in different species doing the same job, traceable to a common ancestor

Osteoblast – a cell that makes new bone

Osteoclast - cell that eats away and breaks down bone causing bone resorption

Oviduct - a tube that connects the ovary to the uterus

Placentation - the process of forming a placenta

Palliative - health care focused on relieving and preventing suffering

Partial agonist- doesn’t activate receptor fully, may “hog” receptors, blocking full agonists

Pathogenesis - the origin and development of a disease

Peptide – string a bunch of peptides together, and you get a protein

Periaqueductal gray – the brain’s the primary control center for reducing pain

Peripheral nervous system (PNS) - the nerves and ganglia outside of the brain and spinal cord

Peritoneal – pertaining to the peritoneum that lines the walls of the abdominal cavity
Phagocyte - a “clean-up crew” cell that “eats” harmful foreign particles, bacteria, and dead cells

Phagocytosis - When a phagocyte “eats” a bacteria or other object by engulfing it

Phenotype- the genetic traits that you can see

Phytocannabinoid – a cannabinoid produced by a plant – THC and CBD are examples

Phyto - referring to plants

Phytochemical – a compound produced by a plant

Pleiotropic- producing many effects, especially when referring to genes

Podocyte – a kidney cell that filters blood

Polymorphism – having more than one form, different phenotypes in genes

Porcine – pertaining to pigs

Prions – they cause Mad Cow Disease

Proteolysis - the breakdown of proteins into smaller polypeptides or amino acids

Proteotoxicity - toxicity caused by proteins, usually by misfolded proteins

Pruritus – chronic itchiness

Psychoactive – will get you high

Psychotropic – will get you high

Pulmonary – pertaining to the lungs
Receptors - These receive the chemical messages and send them into our cells.

Refractory - non-reversible

Refractory pain - pain not responding to the usual treatments, stubborn pain

Renal - pertaining to the kidneys

Reperfusion damage - damage caused when blood returns to an area

Reuptake - reabsorption of a substance by the cells that originally produced it

Rhabdomyolysis - the rapid destruction of skeletal muscle.

RNA - ribonucleic acid, a long, single-stranded chain of cells that processes protein

Ruderalis – small, short-season, autoflowering strains, potency varies

Sativa – tall plant, long skinny leaves, slow maturing; a mental/ party high, occasional paranoia

Sclerosis - a stiffening of an organ with connective tissue
Sebaceous glands - oil glands in the skin

Seronegative - testing negative for a disease

Seropositive - testing positive for a disease

SiRNA- used to inactivate or “silence” a gene to validate the gene’s function

Spermatogenesis - the process of making sperm

Substance P - it sends pain info through the spinal cord

Synapse - a structure that lets a neuron pass an electrical or chemical signal to another neuron

Teratologic – causing birth defects

Terpinoids – gives cannabis its odor, may help cannabinoids to enter cells more easily

Thiophilic - having an affinity with ligands that contain sulphur

Thrombocytopenia – a loss of platelets in the blood

Transgenic – genetically modified, a GMO

Trichome – in cannabis, it usually refers to tiny mushroom-shaped structures that hold THC

Trigeminal nerve – responsible for sensation in the face, and biting and chewing
**Ubiquitination**: The "kiss of death" for proteins. The protein is inactivated by ubiquitin.

**Ubiquitin** – a regulatory protein that inactivates other proteins

**Upregulation** – increase in number

**Uveitis** - infection of the middle layer of the eye involving the iris, ciliary body and/or choroid.

**Vascular** – referring to blood vessels

**Vasodilator** – expands the blood vessels

**Vasoconstrictor** – contracts the blood vessels

**Vasopressin** – constricts blood vessels and is an anti-diuretic

**Ventral tegmental area** – works with the nucleus accumbens in reward and addiction

**Vesicants** = compounds that cause blistering

**Visceral** - pertaining to internal organs, guts
**X**

*Xenograft* - transplanting living cells, tissues or organs from one species into another

*Xerostomia* - dry mouth resulting from reduced or absent saliva flow.
